Compact steel Group with supports on Supports Bases.

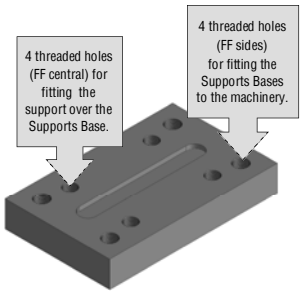

art.BD LV SUPPORTS BASES "BD LV" mod.10/60 Compact steel and Bidirectional supports.

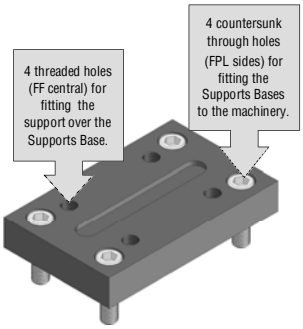

The **BD LV** bases are made from drawn plate iron (Fe) with nitriding treatment and are fitted as standard on mobile Supports **LV,** and if necessary on fixed supports **DVA** and **DVB,** and are produced in two versions:

Version "**FF**", with all the holes threaded, which we normally recommend for use on mobile support **LV** (the central one with nut).

Version "**FPL**" that has the same dimensions with the only difference being four countersunk through holes at the sides for hex. cap screws, recommend for fitting fixed supports **DVA, DVB** and **DVC**. The latter fitted to fixed Supports are only used in cases where needed.

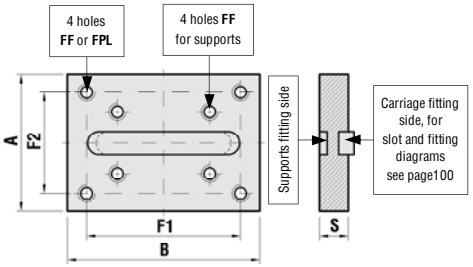

Supports Base **art.BD LV...FF** series with threaded holes. **Normally used for mobile support with nut.**

Supports Base **art.BD LV...FPL** with countersunk through holes at sides. **Normally used for fixed supports with bearings and DVC with bush.**

Base BD LV
Used on Compact Groups with the exception of Compact Light (see page 80).
