art.BD LXR SUPPORTS BASES FOR ROTARY NUT SUPPORTS 20/60

The Supports Bases (in nitrided steel Fe) can be added to the **Rotary nut** series Supports to vary the distance between the ground plane and the centre axis of the nut/TR screw. If correctly fitted with the tabs, the fitting bolts and the "Lock" washers supplied, they become a single body with the previously mentioned Rotary supports (**LXR, DXA, DXR/A, DXR/B). If required it is possible to overlap two or more Supports Bases/spacers** using adequate fitting bolts and inserting all the tabs in their proper seats in order to obtain the maximum stability whilst multiplying the height "**C**" of the spacer..

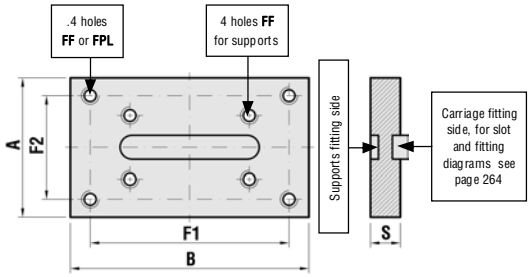

Supports Base **art.BD LXR...FF** series with threaded holes.
Normally used for mobile Supports.

Supports Base **art.BD LXR...FPL** series with countersunk through holes.
Normally used for fixed Supports

Supports Base BD LXR
Used on Rotary nut Groups in supports LXR, DXA, DXR/A and DXR/B.
(photo on side of LXR/PS).
The same base is also used in the Excellent Groups.
